Sizes
Snowflake 83.6 × 99.6 mm, plate 66 × 20 mm, 4 mm loop.
Mistletoe 82.4 × 82.6 mm, tag 56 × 16 mm, 3.5 mm hole.

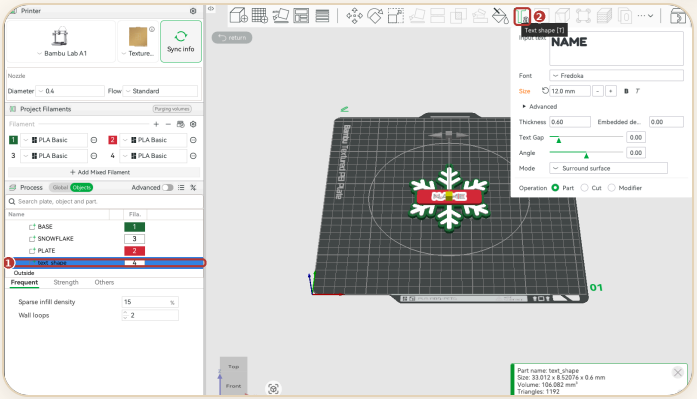

Install the font first
Double-click **Fredoka-Bold.ttf** › **Install**, **before** opening Bambu Studio (or restart it). Any other font works too.

Change the name in Bambu Studio

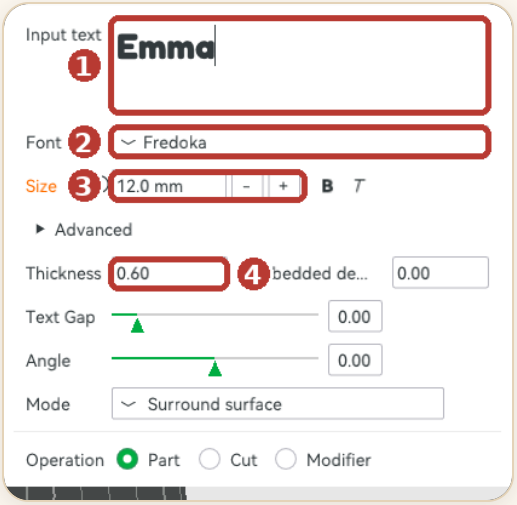

1. **File › Open Project…** and pick the snowflake or mistletoe file. Four colours load (1). In the **Objects** list you'll see **text_shape** (2): that's the name.

2. Click **text_shape** in the list (1), then the **Ta Text shape** button at the top (2). **Always click text_shape first**, or Bambu makes a new, separate text.

3. Type the name in **Input text** (1). Fredoka (2), size 12 mm (3) and thickness 0.6 mm (4) are already set. Long name (9+ letters, or ALL CAPS)? Lower the size to 9–10 mm. Click **return** when done.

4. **Slice plate** and print. Use **File › Save Project as…** for each customer's name.

Other slicers (STL)

OrcaSlicer: right-click the plate › **Add Part › Text**, height 12 mm, depth 0.6 mm. PrusaSlicer has a similar text tool. One-colour printer? Add a pause at the first layer of the name to swap filament.
